1999 KENTUCKY ANNUAL HOSPICE SERVICES REPORT

INTRODUCTION

The Kentucky Department for Public Health announces the release of the 1999 Kentucky Annual Hospice Report. The Health Policy Development Branch, Division of Epidemiology and Health Planning, is responsible for the hospice utilization data collection and reporting set forth in 902 KAR 20:008, revised February 10, 1987. This report is the most recent official hospice data published by the Cabinet for Health Services.

The report covers the period from January 1, 1999 to December 31, 1999 for all hospice programs in the state. The report contains three sections:

- **Section I:** Contains census data by Area Development District (ADD), county and service type. *There are 6 new reporting categories for utilization data., indicated by an asterisk in the list below including:*
 1. Beginning census *
 2. Admissions
 3. Deaths due to cancer *
 4. Deaths due to other causes *
 5. Discharges *
 6. Ending census *
 7. Total patient days
 8. Total Patients Served

Other Notes:

* Lourdes Hospice did not track for Total County Referrals or Total Patient Days, by county.

* Hospice of Southern Kentucky no longer serves Monroe County.

* Casey County is now only served by Hospice of Lake Cumberland.

- **Section II:** Contains utilization of staff data by Area Development District (ADD), and county.
- **Section III:** Primary Diagnosis of Hospice Patients which provides a state summary of diagnosis data; and
- **Section IV:** Primary Diagnosis of Hospice Patients listed by program name, counties served and age cohorts. Counties served by the program are also listed.

Printed with state funds.

An Equal Opportunity Employer M/F/D

1999 Kentucky Hospice Report Summary and Observations

Malignant Neoplasms

The number one cancer primary diagnosis from 1997-1999 was Respiratory/Inthrathoracic cancer, at 35.2% of all cancer diagnoses for all age groups. As noted in recent past Kentucky Hospice reports, this trend has remained constant. In 1999, 2,179 malignant neoplasm cases were reported.

Age Comparative Data for Malignant Diagnoses (Chart 1)

From the enclosed data, it is noted that younger cancer patients (0-18) are more likely to have unspecified diagnoses at 0.4%. The older Hospice patients (65+) were much more likely to have a specific diagnosis. However, it should be observed that there were only 26 (0.4%) total Hospice patients age 0-18 in 1999, compared to 4,237 (68.4%) malignant patients age 65+.

Non-Malignant Diagnoses

Heart disease was the most reported condition in this category, with 24.2% of all non-cancer diagnoses. Of all heart disease patients, 26.1% were over age 65 in 1999.

Children 0-18 (Chart 1)

The most prevalent diagnosis for children 0-18 was Lymphatic Hematopoetic Malignant Neoplasm, followed by Neurological Non-malignant diagnoses.

Hospice Patients Served (Chart 2)

The enclosed Patients Served by ADD (Area Development District) graph illustrates that, Districts 15 (Fayette) and 6 (Jefferson) served the most patients in 1999. This fact can be attributed to the general population size of these 2 districts. It can be noted that district 6 and 15 did experience a notable decrease in-patients served for 1998, relative to 1997 and 1999.

Length of stay (Chart 3)

Average length of stay for Kentucky hospice patients was 53.99 days (Total Patient Days divided by Total Patients Served) in 1999.

It should be noted that ADD 1 (Purchase) reported an average length of stay of 2.45 days. For statistical reasons, ADD 1 was not included in the CHART 3 data.
